ANNUAL INDEX: VOLUME 52, 1991

Subjects

***Indicates a book review**

Use of the Index

This index is designed to reveal subjects and their interrelations. Thus, an entry such as "Anxiety, youth, problem drinking" indicates an item dealing with the interrelationship of the three possibly independent topics or of any two with the third. An entry such as "Drinking frequency, quantity, laws/liquor control" may reveal how drinking frequency, quantity is affected by laws/liquor control or how laws/liquor control affect drinking frequency, quantity. Items are extensively cross-indexed.

Terms

Generally, indexing is as specific as possible without posting to broader terms. Many relationships to certain very frequent terms are not indexed under those terms but appear as main entries throughout the index; scope notes at those terms (e.g., at "Alcoholic," "Drinkers, drinking") are a guide to the index terms used. Preference has been given to direct rather than inverted entries (e.g., "Prevalence of problem drinking" rather than "Problem drinking/prevalence). Information not found one way would be sought the other way or under all possible synonyms. Certain index entries with multiple subdivisions are dealt with by successive main entries, such as "Accidents/fatal"; "Accidents/traffic."
